

Inverting Rinsing Machine

Semi-Automatic and Fully Automatic Models Available

Inverting Rinsing Machines index containers into the rinse area based on the number of rinse heads on the machine. The bottle carriage then flips containers, which are rinsed free of dust, debris and contaminants using air, water, product or other cleaning solution. Containers are then returned to the power conveyor to be moved down the packaging line. Inverting rinsers work with both glass and plastic bottles in a range of shapes and sizes.

Standard Features:

- Heavy-Duty Stainless Steel Construction
- Automatic Container Indexing
- Allen Bradley Micrologix PLC with Touchscreen Interface
- Soft Pad Bottle Grippers
- Vision Systems for Container Available and Back Up Detection
- Easily Adjustable Rinse Heads
- Air or Wet Rinsing Machine Available
- Variable Speed Power Conveyor
